

# TOP 5 WAYS HACKERS CAN BREACH YOUR BUSINESS

**WEAK PASSWORDS**

Weak passwords are involved in 8/10 cyber attacks. Use a password manager like KeePass and aim for a minimum of 20 characters.

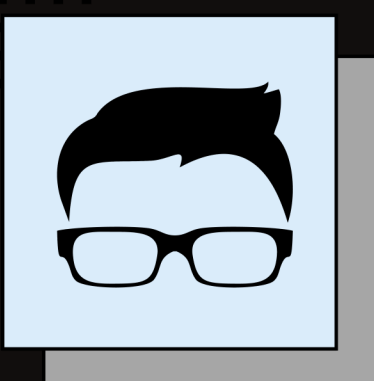

**MALWARE ATTACKS**

An infected website or USB drive could capture credentials once connected. Make sure your anti-virus is updated and refrain from connecting unknown devices to your PC.

**PHISHING EMAILS**

80% discount on all Amazon products is probably too good to be true! Do not click on email links and re-type the URL in your browser.

**MAN-IN-THE-MIDDLE ATTACKS**

Hackers could intercept comms between you and your bank's website. Never conduct sensitive activities on a public Wi-Fi and use a VPN service.

**STOLEN DEVICES**

Unauthorized access to your data could be presented with a stolen laptop. Always keep devices in a secure location and use hard drive encryption.
